

AEM TASK – 8: MSM, Blueprint, Live Copy, and Rollout

- **MSM (Multi-Site Manager):** AEM's MSM feature helps manage multiple sites efficiently by establishing relationships between similar content across different locales or variations.
- **Blueprint:** A blueprint serves as a master version of a site or page and acts as the source for live copies. Changes made in the blueprint can be rolled out to the live copies.
- **Live Copy:** A live copy is a child version of a blueprint page/site, inheriting content and structure from the blueprint. Updates from the blueprint can be rolled out to the live copy.
- **Rollout:** Rollout refers to the process of pushing updates from the blueprint to its live copies, ensuring content synchronization.

Creating a Site Using MSM with us/en as the Source

Steps to Create an MSM-Based Site

1. **Created the Blueprint Site:** Defined the master structure, which acted as the source for live copies.
2. **Created a Live Copy:** Generated a linked version of the blueprint at a different location to ensure content consistency.
3. **Rolled Out Changes:** Updated the live copy whenever changes were made to the blueprint, ensuring content synchronization.

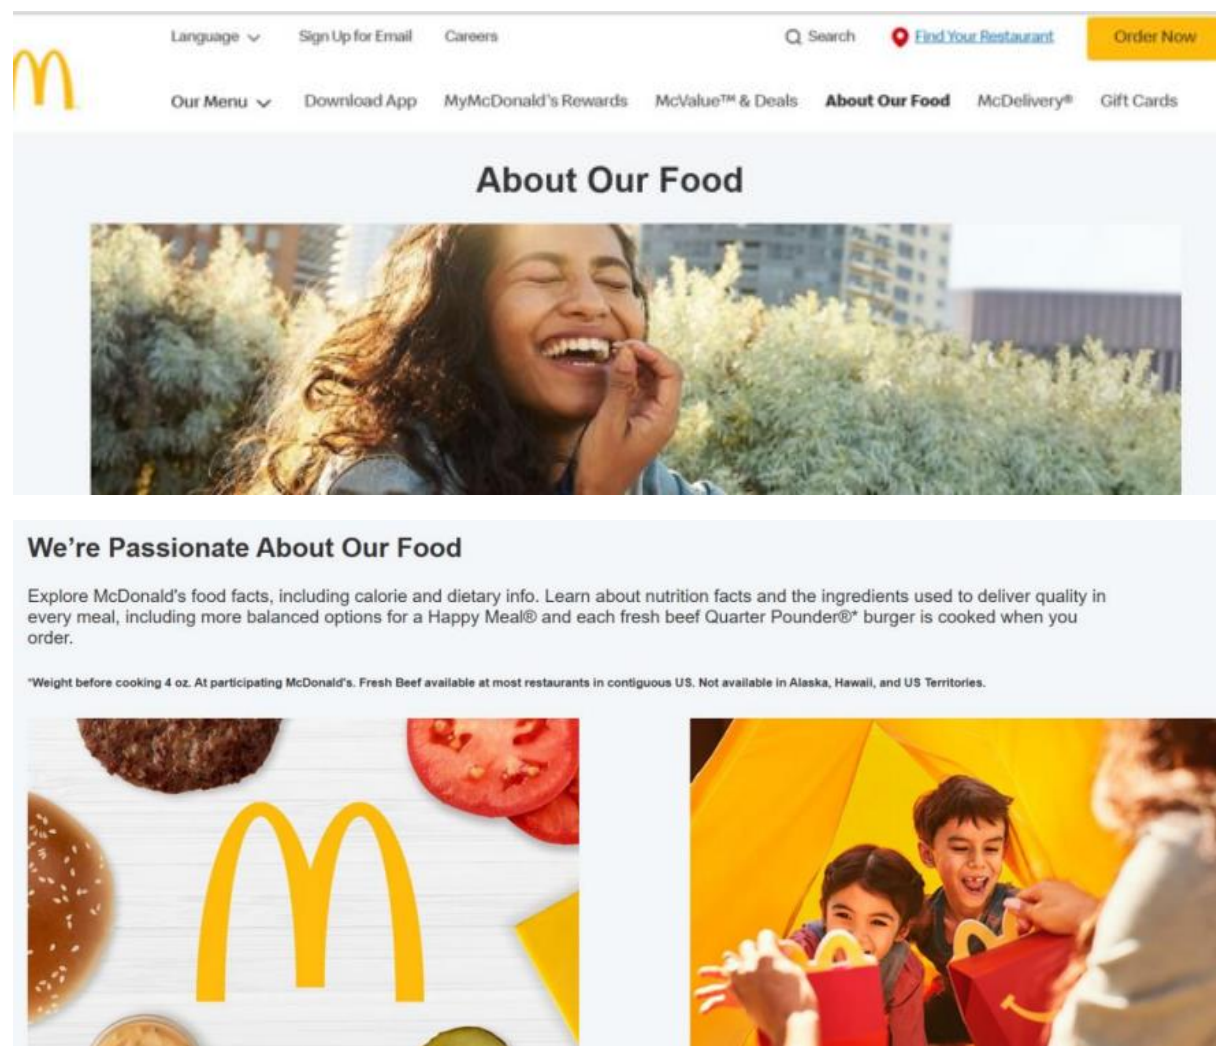

The screenshot shows the 'Blueprint Configurations' table in AEM. At the top, there are 'Properties' and 'Delete' icons, and a '1 selected' status indicator. The table has two columns: 'CONFIGURATION' and 'SOURCE'. There are two rows: 'Experience Fragments' with source '/content/experience-fragments' and 'Practice Blueprint' with source '/content/myTraining/us/en'. The 'Practice Blueprint' row is selected, indicated by a blue background and a checked checkbox in the 'CONFIGURATION' column.

Blueprint Configurations	
CONFIGURATION	SOURCE
<input type="checkbox"/> Experience Fragments	/content/experience-fragments
<input checked="" type="checkbox"/> Practice Blueprint	/content/myTraining/us/en

Creating the McDonald's 'About Our Food' Page in AEM

Steps to Author the Page in AEM

1. Created a Page: Used AEM's page creation feature to develop the required page structure.
2. Added Components: Included necessary components such as images, text, and buttons to replicate the reference page.
3. Published the Page: Made the page live and accessible within AEM

Commitment to Quality

We're dedicated to improving the way we prepare our quality food and the ingredients that go into it.

Setting Up AEM Dispatcher Locally

1. Verified that all required software and configurations were in place before starting the setup.
2. Downloaded the necessary dispatcher module for integration with Apache.
3. Configured the required settings to route traffic through the dispatcher.
4. Completed the setup by restarting services and testing the configuration.
